OVEN, FREEZER & MICROWAVE TESTED & APPROVED

Eco Guardian manufactures a wide range of environmentally-friendly and exclusive products, including our latest offering: Compostable and chemical-free, heat sealable food trays. Heating and cooking food in Eco Guardian food trays is both easy and safe. Our sturdy trays do not retain heat as traditional food containers do. In fact, you can even remove one of our food containers from a hot oven without oven mitts! But be careful... the oven and the food in your Eco Guardian tray will still be hot.

In addition to preparation of hot meals, the natural image of these unique trays make them ideal for the packaging and presentation of fresh fruit and vegetables, while the breathable nature of this material also extends their shelf life.

| Description | Code | Pieces/ Sleeve | Sleeves/ Case | Pieces/ Case |
