THE #1

Privately-Owned Canadian Company to Provide Solutions for Your Reusable Bag Needs

In 2004, Eco Guardian started with a simple question: How can we help reduce the number of single-use plastic bags we were drowning in? With that question came the product line that started our company- reusable Bags. From that day forward, every bag we sold had the potential to, and did, replace thousands of plastic bags and over the course of a few years, we saw the industry begin to prefer reusable over single-use plastic bags.

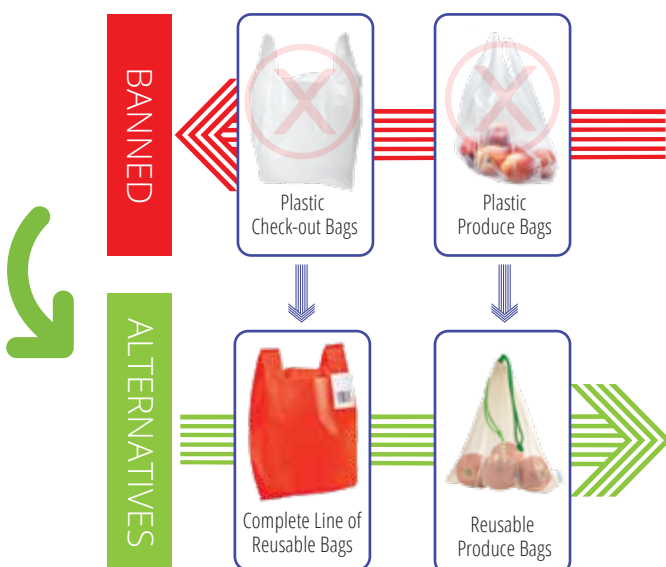

We have a deep understanding of the market which allows us to be innovative and agile. We focus on being sustainable and manufacture our products in close proximity to our raw materials to minimize our environmental impact. Our team continuously researches trends and new technology in order to add more innovative sustainable products and practices to our business, and yours.

HOW WILL THE PLASTIC BAN IMPACT YOU?

Banned plastic bags will result in a reduction of plastic checkout bag sales – the 15 billion plastic bags Canadians use annually. Banned plastic bags are any bag designed to carry goods from a business and:

- Made from plastic film,
- Not capable of carrying ten (10) kilograms over fifty-three (53) metres 100 times, or
- Will break or tear if washed in a washing machine.

WHY ARE Single-Use Plastics Banned?

Canada is moving toward a circular economy for plastics by pursuing zero plastic waste

REUSABLE BAGS

Eco Guardian offers a variety of bag types and materials to suit your needs. Our reusable bags are certified non-toxic and lead-free, and are machine washable. The most popular materials are woven and non-woven polypropylene.

Sturdier and stronger than regular bags, they can carry up to 35 lbs/16 kgs and will stand up to years of repeated use. We also offer biodegradable bags made from natural materials like jute, cotton, and bamboo.

Materials	Description	Benefits
Woven Polypropylene (WPP)	Plastic threads woven together in a more traditional manufacturing process to create a durable material. Recyclable and reusable.	Glossy or matte with 100% print coverage. Made using recycled materials. Highly durable, strong and tear-resistant. 100% waterproof. Machine washable.
Non-Woven Polypropylene (NWPP)	Fibers bonded together making it a durable material. Recyclable and reusable.	Pantone-matched spot color printing. Photo-quality printing available. 1000's of fabric colors. T-shirt bags have soft, cloth-like feel. Machine washable.
Jute	Vegetable based fibre plant. High tensile strength and resistance to heat and fire. Recyclable and compostable.	Pantone-matched spot color printing. Cloth-like feel. Hand washable.
Cotton & Canvas	Soft, staple fibre. Rapidly renewable and sustainable resource. Recyclable and compostable.	Pantone-matched spot color printing. Soft, cloth-like feel. Machine washable.
Bamboo	Light weight and soft. Naturally antibacterial and hypo allergic. Recyclable and compostable.	Pantone-matched spot color printing. Soft, cloth-like feel. Machine washable.
Recycled polyethylene terephthalate (RPET)	100% postconsumer recycled material. Extremely strong. Recyclable and reusable.	Glossy or matte with 100% print coverage. Highly durable and tear-resistant. 100% waterproof.
Polyester	A group of synthetic compounds that can be woven or knitted into fabric. Recyclable and reusable.	Pantone-matched spot color printing. Soft, cloth-like feel. Machine washable.
