

Problematic Plastics

Hard to recycle/problematic plastics according to the Canadian Government are:

Food packaging and service ware (for example., takeout containers and lids, plates, bowls and cups) made from problematic plastics, including:

1. Foamed Plastics,
2. Black Plastic,
3. Polyvinyl Chloride (PVC),
4. Oxo-Degradable Plastic, or
5. Multiple (composite) Materials Including One or More Plastics

As these plastics are considered problematic, it is not unrealistic to speculate that we can anticipate that some sort of regulations will eventually be imposed surrounding these plastics.
